# Hello, I'm Azkhal Zavier

## \* About Me

I am a Bachelor of Information Systems student at Gunadarma University. With a strong interest in Fullstack Web Developer and Software Engineering, actively honing skills in the MERN Framework. Passionate about UI/UX and aim to create dynamic and responsive web experiences. I demonstrate excellent problem solving skills and a collaborative mindset. Committed to continuing to follow the latest industry developments and provide a positive impact in the digital era. With extensive experience in practical projects and organizations, I am ready to face challenges and make significant contributions in the world of IT.

# Tax Center Gunadarma University

Fullstack Web Developer

Des 2024 - Present

- As a Fullstack Developer, I have the privilege of maintaining the [taxcenterug.com/](https://taxcenterug.com/) site for the Gunadarma Tax Center. Strive to ensure a smooth and user-friendly experience for our website visitors.
- Given the responsibility to maintain the tax center website so that it always updates the appearance, data and content regularly.
- Improve website functionality and performance, providing high quality solutions to support Gunadarma Tax Center objectives.

# Aisa Clean Laundry

## \* UI/UX for Ordering Laundry Services

The laundry service website is here as a complete solution for customers and business owners with innovative features such as online ordering, pick-up and drop-off services, digital payments for customers, and also easy recap or data collection for business owners. Through online ordering, customers can easily order laundry anywhere and anytime. The pick-up and drop-off feature allows customers to pick up and deliver clothes according to their needs and convenience.

# VillaPlace

## \* Villa Rental Solutions Website

Villaplace is a villa rental platform that we created to answer the need for more structured and easily accessible villa accommodation information in the digital world. This project is designed to:

- Provides an intuitive user experience through secure search, reviews and ordering features.
- Opening wider market access for villa owners in a simple and efficient way.

# TanamTani

## \* UI/UX Agricultural Management and Plant Health

The TanamTani application focuses on digitalizing the agricultural sector by providing agricultural management and plant health solutions. Through this application, farmers in Indonesia, especially in rural areas, can access real-time information about weather, market prices and plant care recommendations.

# HPP+

## \* Android Application for COGS Calculation

HPP+ is a Flutter-based application with Firebase integration specifically designed to help MSMEs calculate Cost of Goods Sold (COGS) and manage monthly and annual finances. With a simple interface and sophisticated features, HPP+ is here to support small entrepreneurs to more easily and efficiently manage their business finances.
